APPLICATION ACCEPTED

Notice is hereby given that the person interested in opposing the grant of Patents to any of the applications referred to below at any time within four months from the date of this Patents' journal may give notice at the Patent Office on the prescribed Form P-7 of the Patents Rules 18(1) of 2003.

The six figures number shown in the right hand side are those given to applications on acceptance of the complete specification under which the specification will be printed and subsequent proceeding taken.

The figures shown within square brackets after the title of inventions indicate their classification index at acceptance.

Typed copies of the specification which are to open to public inspection can be supplied by the Patent Office on payment of the prescribed charges which may be as certained on application to the office.

262/2009	1) ASTRAZENECA AB Sweden. 2) Array BioPharma, Inc. USA.	"A pharmaceutical composition comprising a hydrogen sulphate salt of 6-(4-bromo-2-chloro-phenylamino)-7-fiuoro-3-methyl-3H-benzoimidazole-5-carboxylic acid (2-hydroxy-ethoxy)-amide, and a carrier matrix" A61K9/48 and A61K31/4184. **142535** The invention concerns pharmaceutical composition containing a hydrogen sulphate salt of 6-(4-bromo-2-chloro-phenylamino)-7-fluoro-3-methyl-3H-benzoimidazole-5-carboxylic acid (2-hydroxy-ethoxy)-amide and to processes for the preparation of said composition.
285/2011	CHIESI FARMACEUTICI S.p.A., Italy.	"PROCESS FOR PROVIDING PARTICLES WITH REDUCED ELECTROSTATIC CHARGES" A61K9/00. **142536** The invention concerns a process for preparing carrier particles for dry powder formulations for inhalation having reduced electrostatic charges. The invention also concerns the carrier particles thereof.

472/2013	THE V LIMITED, New Zealand.	"SPORTS TRAINING APPARATUS" A63B69/00,A63B22/00 and A63B67/10. **142537** A sports training apparatus for enhancing a users' playing technique of ball sports such as cricket. The apparatus comprises a frame with two front spaced legs and a rear spaced leg; a flexible net attached to the frame and extending across the space formed between each of the front spaced legs and the rear spaced leg to form two converging net panels, wherein the net is reinforced along each edge of the net and horizontally along a vertical plane of convergence of the two net panels from a top edge to a bottom edge of the net to facilitate rebound of the ball when driven into the net; and a ball suspended on a line, the line attached to the frame at a swivel configured to facilitate rotation of the line about the line attachment point. 
524/2013	DAWLANCE (PVT) LIMITED. Pakistan.	"LOW VOLTAGE START UP SYSTEM FOR REFRIGERATOR" F25D17/00. **142538** The present inunction relates to a low voltage start up system for refrigerator which can work at low voltage starting from 135 v comprises a high torque motor compressor which maintain the balance pressure of whole cycle, double tubing evaporator for making circuit balance and to get optimum outcomes, friction rate and evaporation rate both increased which gives maximum cooling with low balance pressure, wire type condenser due to such condenser flow through the gravitational force to get the balance pressure of 3 & 5 Kgfcm2 which reduce the head pressure of the compressor which help in low voltage start up and make the compressor cool to increase its life and decrease electricity cost. 587/2013	DAWLANCE (PVT) LIMITED. Pakistan.	"MIDDLE BEAM WITH FLAPPER MECHANISM FOR REFRIGERATOR"

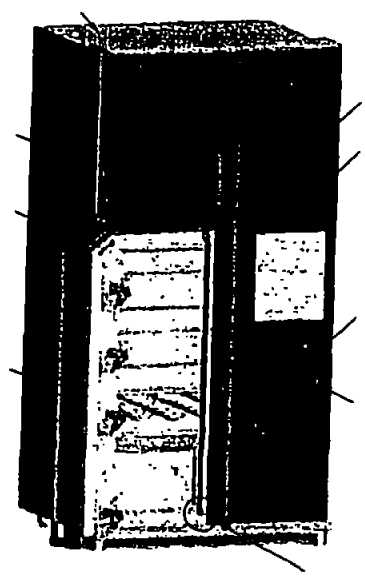
F25D23/00,F25D11/00 and F25D21/00.

142539

The present invention relates to the middle beam of refrigerator comprising a cabinet 1 having separate refrigerator and freezer compartments with two refrigerator door 3a, 3b for refrigerator compartment and two freezer door 2a, 2b for freezer compartment characterized in that heavy middle beam 4 with flapper as first refrigerator and freezer doors act as seal to cover the gap created when both refrigerator and freezer doors are closed to cut off the heat transfer between the cabinet inside 1 outside, the said beam having a high mechanism supported with spring that flap the middle beam upto two extreme position 90 degree apart, and an insulating layer inside the middle beam which restrict the heat transfer.



486/2014	Oerlikon Textile GmbH & Co KG. Germany.	"A DEVICE FOR SPINNING THREADS" **142540** In a device (1) for spinning threads, comprising at least one melt supply means, at least one nozzle package (4) including at least one spinning nozzle, wherein a first housing (8) with one first housing wall (3) is arranged around the nozzle package (4), wherein a second housing (10) is arranged around the first housing (8), having one second housing wall (6), wherein a heating chamber (14) filled with a gaseous heating medium is provided between the first and the second housing (8, 10), wherein the first and the second housing wall (3, 6) delimit the heating chamber (14), it is provided that the heating chamber (14) comprises a housing bottom (28) slanted downward from the first housing wall (3) towards the second housing wall (6) so that condensate accumulated on the housing bottom (28) drains off towards the second housing wall (6).
